PROJECTS

- **Startup AI – Visual Co-Founder Platform**
Built a full-stack AI platform by implementing ML-powered idea-validation scoring, JWT authentication, and role-based access control, resulting in an end-to-end tool for founders to assess startup viability, discover government schemes, and research via an integrated Wikipedia agent and AI chatbot.
- **Quiz Application on Cloud**
Deployed a scalable quiz application by provisioning AWS EC2 infrastructure through Terraform (Infrastructure as Code) and integrating DynamoDB, resulting in a cloud-native architecture supporting real-time response handling with minimal manual server management.
- **Skill2Hire – AI Placement Prediction (AIDLC)**
Developed an AI-powered placement prediction application by building a Voting Classifier ensemble (Random Forest, Gradient Boosting, Logistic Regression) served through a Flask REST API with Supabase PostgreSQL, containerized with Docker, and deployed via GitHub Actions CI/CD to Render.
- **Student Academic Prediction – Ensemble Learning (MLOps)**
Built a student outcome prediction system using five ensemble ML models with explainable AI visualizations and a rule-based academic advisor, resulting in an interactive Chart.js dashboard with prediction history logging.
- **GreenGlow Cosmetics – MERN E-Commerce Platform**
Built a full-stack e-commerce platform implementing JWT authentication, role-based access control, and complete product CRUD operations, resulting in a functional admin-managed online store with end-to-end order and inventory handling.
